Experience

AI Systems Engineer (POC), University of Arizona × McGraw Hill, Remote **Jan 2026 – Present**

- Built production backend for a RAG-based AI assistant: document ingestion, retrieval pipeline, prompt routing, and GPT API integration.
- Designed role-based access controls and retrieval scoping enabling instructors to configure assistants constrained to course materials.
- Iterated on chunking and retrieval strategies to improve multi-step query accuracy and output consistency across configurations.
- Developed test harnesses to validate retrieval quality and output behavior across model and configuration changes.

Computer Science Fellow, Handshake AI MOVE Program, Remote **Sep 2025 – Present**

- Built reproducible Docker CI environments for automated testing of AI agent patches across diverse codebases at scale.
- Re-implemented bug fixes across unfamiliar codebases as ground-truth; authored fail-to-pass test suites enabling automated patch validation.
- Designed structured test harness patterns to improve coverage and reproducibility across agent-generated software patches.
- Collaborated with engineering leads to refine prompt patterns and structured output formats, improving signal quality across benchmark iterations.

Founding Engineer, SkillfullyAware (SAAQ) App, Tucson **Oct 2025 – Jan 2026**

- Designed and built scalable REST API services processing structured and unstructured user input into analytics and reporting pipelines.
- Led MVP backend from scratch: data models, service architecture, LLM API integrations, and vector retrieval shipped under fast-moving requirements.
- Delivered features end-to-end across API, data layer, and system integrations; defined architecture patterns for extensible development.

AI Solutions Developer, Andrew Weil Center for Integrative Medicine, Tucson **Aug 2025 – Nov 2025**

- Built modular backend services and document ingestion pipelines for AI-driven healthcare applications emphasizing fault tolerance.
- Integrated AWS components (Lambda, S3) to support backend workflows; standardized API contracts and schemas across ingestion pipelines.
- Collaborated with clinical and technical teams to define reliability requirements for services handling structured medical content.

GRC Business Analyst, University of Arizona ITS, Tucson **Sep 2023 – Aug 2025**

- Automated compliance workflows with scripting and data pipelines, reducing manual effort and risk across recurring audit processes.
- Built reporting dashboards for audit-ready enterprise systems serving large cross-functional stakeholder groups at scale.
- Partnered with compliance officers & system owners using ServiceNow GRC to assess controls and drive timely remediation.
- Standardized data tracking and reporting across teams, improving compliance visibility and reducing audit cycle overhead.

Projects

Guardrail Auditor github.com/Harsh7115/guardrail-auditor

- **Tools:** Next.js 14, TypeScript, Prisma, Neon Postgres, Tailwind CSS, Vercel
- Full-stack web platform with a TypeScript/Next.js frontend, REST API backend, Prisma ORM with Neon Postgres, and a modular test execution engine; ships risk-tiered verdicts and structured reports exportable as JSON/CSV, deployed on Vercel.

go-distributed-kv github.com/Harsh7115

- **Tools:** Go, Raft Consensus, gRPC, Docker
- Implemented a distributed key-value store with Raft consensus for leader election and log replication, achieving linearizable reads and fault-tolerant writes validated under simulated node failures and network partitions.

Java Personal Finance AI Platform github.com/Harsh7115

- **Tools:** Java, JavaFX, SQLite, Python (ML), Docker, Jenkins
- Modular finance platform with concurrent transaction processing and SQL-backed persistence; integrated Python ML services for automated expense categorization with Docker and Jenkins CI/CD.

Technologies

Languages: Python, Go, Java, TypeScript, SQL, JavaScript, C, C++

Backend & Systems: REST APIs, Node.js, Express.js, Django, Redis, PostgreSQL, Docker, Linux, gRPC

AI & Backend Frameworks: RAG Pipelines, LLM APIs, Vector Databases, LangChain, Prompt Engineering

Cloud & DevOps: AWS (Lambda, S3), Docker, GitHub Actions, Jenkins, CI/CD, Linux

Engineering Practices: System Design, Distributed Systems, Fault Tolerance, Testing & QA, Agile, Code Review

Education

University of Arizona, BS in Computer Science, Minor in Software Engineering **Aug 2022 – May 2026**

- GPA and Honors: 3.85/4.0 (Highest Merit Scholarship, Dean's List, Highest Academic Distinction)
- Coursework: Data Structures & Algorithms, Object Oriented Programming, Data Science & Neural Networks, Advanced C Programming, Computer Architecture, Software Engineering, Operating Systems, Computer Networking
